PREFACE

The Railway Steam Locomotive was invented in England. For nearly one hundred years the firm of Beyer Peacock has been intimately associated with the evolution and development of locomotive design. From the very early days, Beyer Peacock locomotives have been notable for clean and graceful design and also for the highest degree of excellence of materials and engineering.

During the last decade or two the Company has designed and manufactured locomotives of very great power, and many of the largest locomotives now operating on the world's railways have been built at the Company's famous Gorton Locomotive Works.

Beyer Peacock locomotives are to be found all over the world. They are characterised by a specialisation in robustness of design, perfection of materials and excellence of workmanship and are accordingly noted for ease of maintenance, economy in operation and also for their lasting qualities.

This catalogue contains examples of various types for different duties and gauges.

PREFACE

La Locomotive à Vapeur fut inventée en Angleterre.

Depuis près d'un siècle, la firme Beyer Peacock a été intimement liée à l'évolution et à l'amélioration des conceptions relatives à l'étude des locomotives; dès le début les machines Beyer Peacock ont acquis la réputation d'excellentes réalisations, tant pour leur fabrication, que pour la qualité des matériaux employés, ainsi que pour l'élégance de leur ligne.

Depuis une vingtaine d'années, ce Constructeur a conçu et réalisé dans ses fameuses Usines de Gorton, la fabrication des locomotives très puissantes, ainsi que certaines des plus puissantes qui ont jamais été construites et qui roulent actuellement sur les Réseaux du Monde entier.

Les machines Beyer Peacock se distinguent par leur conception robuste, leur fabrication soignée, l'excellence des matières premières utilisées—qualités qui garantissent un entretien facile, une économie d'exploitation et une longue durée.

Ce catalogue contient les exemples de types variés de machines correspondant à diverses applications sur des voies différentes.

PREFACIO

La Locomotora de Ferrocarril a Vapor fué inventada en Inglaterra. Durante casi cien años la casa de Beyer Peacock ha estado intimamente asociada con la evolución y desarollo de diseños de locomotoras. Desde las fechas más antiguas las locomotoras de Beyer Peacock se han destacado por su diseño bien delineado y atractivo así como por el más alto grado de excelencia de materiales y de ingeniería.

Durante la última década o dos la Compañia ha proyectado y fabricado locomotoras de muchísima fuerza y muchas de las locomotoras más grandes que funcionan en los ferrocarriles mundiales han sido fabricadas en los famosos talleres de la Compañia en Gorton.

Las locomotoras Beyer Peacock se hallan en todas partes del mundo. Se caracterizan por la especialización en la solidez del conjunto, la perfección de materiales, y la excelencia del trabajo, y por eso se destacan por su facilidad de cuidado y servicio, su economía al funcionar, y también por sus calidades duraderas.

Este catálogo contiene ejemplos de varios tipos para operaciones y trochas diferentes.

ENQUIRIES

DEMANDE De Renseignements

PREGUNTAS

Enquiries should be accompanied by the following particulars:-

Gauge

Maximum gradient and its length

Maximum curvature on running lines

Maximum curvature for whole railway

Is grade compensated for curvature?

Gauge widening on maximum curvature

Maximum speed

Service (Passenger, Goods or Shunting)

Weight of train (excluding engine)

Longest run without stop

Type of rolling stock

Weight of rail

Weight per foot run of wheel base

Maximum axleload

Type of fuel

Quality of fuel

Calorific value of fuel

Quality of water

System of brakes

Les demandes de renseignements doivent être accompagnées des détails ci-dessous:-

Voie

Rampe maximum et sa longueur

Courbe maximum sur ligne principale

Courbe maximum du réseau

L'équivalence de rampe est-elle établie en courbe

Surécartement de la voie sur courbe maximum

Vitesse maximum

Service : Voyageurs, Marchandises ou Manœuvre

Poids du train attelé

Plus long trajet sans arrêt

Type du matériel roulant

Poids du rail par yard

Poids par pied d'empattement

Charge maximum par essieu

Combustible employé

Qualité du charbon

Valeur calorifique du combustible

Qualité de l'eau

Genre de freinage

Todas las preguntas que se nos hagan deberían ir acompañadas de los pormenores siguientes:-

Trocha de la vía

Pendiente máximo y el largo del mismo

Curva mínima en la vía principal

Curva mínima, incluyendo los desvíos

Si los pendientes son compensados para las curvas

Ensanche entre rieles en curvas mínimas

Velocidad máxima

Clase de Trafico : trenes de pasajeros, de carga, o servicio de maniobras

Peso del tren, exclusivo de la locomotora y tender

Corrida más larga entre paradas del tren

Tipo del material rodante

Peso del riel ; por yarda ó por metro

Peso distribuido por metro entre ejes extremos

Peso máximo permitido por eje

Clase de combustible

Calidad de carbón u otro combustible

Valor calorífico del combustible

Calidad del agua

Sistema de frenos

LOCOMOTIVE MANUFACTURE

Beyer Peacock have for nearly one hundred years been engaged upon the design and manufacture of locomotives. They have striven at all times to produce a well-designed product of the best materials with the finest workmanship. The factory, situated in Manchester, forms part of that original foundation of mechanical engineering for which this City has been famous for more than a century.

THE BEYER-GARRATT ARTICULATED LOCOMOTIVE

This is an example of a modern Beyer-Garratt articulated locomotive. We have specialised in this most successful type of locomotive for many years and have built over one hundred designs to suit differing conditions of gauge, grade and curvature existing on railways all over the world. Illustrations and details of numerous types are contained in our special Brochure entitled "Beyer-Garratt Articulated Locomotives."

INDUSTRIAL GARRATT LOCOMOTIVES

The industrial type of Beyer-Garratt locomotive provides greatly increased power over the normal four coupled or six coupled tank engine. Those used in England have a 16 ton axleload with a tractive effort of 27,000 lb. at 75% boiler pressure. The short wheel base of 8' 6" makes it possible to negotiate 90 ft. radius curves on the standard gauge.

RACK LOCOMOTIVES

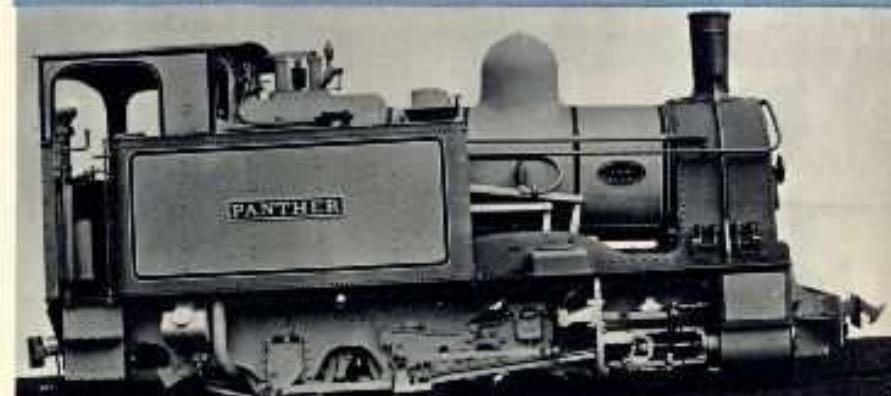

Rack locomotives are included amongst the more unusual forms of railway power which we have supplied. We have designed and manufactured various types for the difficult conditions of mountain railways in many parts of the world.

PUERTO CABELLO & VALENCIA RAILWAY

HYDRAULIC
PRESS

PORTABLE TOOLS FOR RUNNING SHEDS

Time and money can often be saved by the use of portable tools in running sheds. We have supplied them to many railways. They are fully described in a separate catalogue, entitled "Running Shed and Repair Shop Tools."

STEEL CASTINGS

We have a most up-to-date steel foundry equipped with electric furnaces and we are in a position to supply all types of steel castings. Our plant includes annealing furnaces of the most modern temperature-controlled type, and our metallurgical laboratory and testing department ensure castings of the highest quality.

THE BEYER PEACOCK GROUP

includes factories for the manufacture of a wide range of products in mechanical and civil engineering, refrigeration, electrical appliances and many domestic and export supplies.
